.04, when viewing the.eml file on the client the whole thing is corrupted, i was wondering if this a common issue or just me? is it possible to fix this problem its a geforce gtx 960 1gb drpi, 512 mb ram... anyone know where I could ask questions about log files and what is and isn't safe to have in my log files? I have multiple services that I would like to log to a few different log files but I'm not sure what is safe to log and what is not. !server | kevinch, kevinch,: Ubuntu Server Edition is a release of Ubuntu designed especially for server environments, including a server specific!kernel and no!GUI. The install CD contains many server applications. Current!LTS version is!Trusty (Trusty Tahr 14.04) - More info: - Guide: - Support in #ubuntu-server hi i need a web cam driver for a hp laptop and i'm not sure which one to choose the cam is a: SONY HC-X710 any help plz cfhowlett: thanks, i have 2gb ram, thats the issue, it says the driver is built into the gpu, should it not be using the integrated gpu? is it possible to "pipe" ssh connections through an application? drpi, you're right - I didn't actually look that closely. 2GB is a real challenge for ubuntu... Rudd-Ershadi, well thats just it, how could i log in with 2gb ram, then? like I have a server with several ssh connections and 82157476af
